Abstract: In this article, the importance of English as a world language, the benefits of learning and knowing a foreign language, international terms widely used in modern education, words related to the field of production, their application, comparison, using ways by students outside the field of education in their careers.

Keywords: New Uzbekistan, English, foreign language, vocational schools, production, education, pedagogy, development, competition, bilingual.

Only mature professionals who work on themselves in every field can compete. Competition is a good impetus for development. Of course, it is important to be competitive in the field of education, to work as a leading specialist. If we want to educate the young generation in the age of technology, full of innovations, we must be able to answer every question. This is not my field, and to say that I can't answer your question is to undermine the teacher's position in front of students. The rapidly developing youth of New Uzbekistan, thirsty for knowledge, do not want to lag behind in education. Let's remember one of the proverbs: Til bilmoq-el bilmoq "Knowing the language - knowing the nation", which distinguishes our young people among their peers, who can increase their opportunities by learning the language. And no matter what they do, no matter what goal they set for themselves, they are very likely to achieve it. Today, the learning of foreign languages has been rising to the level of policy, as evidenced by the fact that the lessons of foreign languages for children in preschool education are organized at a special level and in an interesting way. The question arises: why do we learn a foreign language? What is the purpose of raising the level and status of foreign language education?

No matter where you are around the world, what country you are on a study or business trip, you can make all your plans come true if you can explain your wishes in English. If you plan to travel to many foreign countries on your own, you may not be able to learn every foreign language. But if you only know English, you will not face any difficulties during your travels. During the years of independence, cooperation with other countries has expanded and roads have been opened. With the new reforms being carried out in Uzbekistan, we must increase the prestige of the Uzbek name in the world, be mature in all areas, while creating a New Uzbekistan. In the age of advanced technology, we need to know how to use every technique, to be able to take full advantage of opportunities. What can stop us from becoming the closest helpers and relieving our burdens? We don't know a foreign language!? Because most of the technology is imported, the keys are written in English. Learning a foreign language and computer literacy is a modern requirement at a time when the digitalization process is taking place all over the world. Today it is necessary for the representatives of the Internet, IP, IT to have a basic knowledge of English. Even a mature specialist is hesitant to use new equipment, new machines, if he knows a foreign language, he can use them without difficulty.

It is very effective to study English not only as a foreign language, but also going with other subjects. First of all, we should study the integration of education and world educational standards. In addition, it serves as a factor in increasing the consciousness and thinking of

students. To give examples below, in the book "Production and Automation", published by D.R. Ubaydullayeva and Sh.I. Razzakova for vocational schools: there are two types of multibuses: PC / XT (Personal Computer Extended Technology) and PC / AT (PC Advanced Technology -improved PC).

PC / XT bus tire - 8-bit data bus and 20-bit address bus tire with a clock frequency of 4.77 MHz; has 4 lines for hardware interruptions and 4 channels for direct memory access (DMA channels-Direct Memory Access). The address bus limits the microprocessor space size to 1 Mb and is used with MP 8086, 8088.

ISA bus (industry Standard Architecture). MCA bus (Micro Channel Architecture). VLB bus (Vesa Local Bus-Vesa local bus). PCI bus (Peripheral Component Interconnect).

U.T. Zokirov, T. In the book "Sewage network equipment" published for vocational schools by Mamajonov: Pipes made of high-density polyethylene (polyethylene) polyethylene low-pressure pipes with a diameter of 10-1900 mm, pipes made of low-density **polyethylene** (high-pressure polyethylene) it is 10-160 mm.

Pipes made of pressurized **polyvinyl chloride (polyvinylchloride)** (PVC) are produced.

Pressure **polypropylene** (polypropylene) pipes are also used in the sewage system. They have a diameter of 32-200 mm and a working pressure of 1.0 MPa.

The smooth side of the ceramic pipe is inserted into the mouth of the second pipe, and the annular space between them is fastened with a rope made of hemp wool soaked in tar, and the rest is filled with asphalt **mastic**.

N.B. In Pirmatov's book "Technology of transformer production" published for vocational schools: the second collection begins. In this case, the wiring diagrams, output and input terminals (**clammer**) are assembled and welding is performed.

Hard electrical insulation materials also include lacquer, electrical insulation varnishes, adhesives, **paraffin (paraffin-fuel)**, soft and hard insulation mixtures, etc. There are many such examples. Terms in English are widely used not only in textbooks but also in our daily lives. Whether it's an advertisement in the media or an advertisement on the Internet, English words are entering your vocabulary. Okey, ingredients, process and more.

Nowadays, you know that employees of government agencies and public enterprises in general, who know a foreign language well, can use it in their field, have a certificate of international assessment of foreign language proficiency, get a 20% bonus. A decision was made to pay extra. All professionals, students and even officials who want to take part in an international assessment competition to obtain a certificate are taking language courses. This is evidence of the fact that today the level of learning foreign languages is growing.

List of used literature:
