Master Degree of Fergana State University

Abstract: In the article we may see the moral and patriotic education of preschool children is given that the education of patriotism and civic principles is one of the most important components of the moral education of preschool children. Issues of working with parents in education of preschool children in moral and patriotic spirit are discussed

Keywords: patriotism, tradition, working with parents, preschool education.

Enter. The social reforms carried out in the Republic of Uzbekistan are of particular importance in ensuring the development of society, introducing a continuous education system, as well as bringing up an independent and free-thinking person. First of all, this requires the future generation to have a high level of knowledge, skills, a broad worldview and faith that can boldly adapt to these changes. Because the future and prospects of our country depend on the upbringing of this young generation.

The motto "Man is equal to society, society equal to man" should remain the law of our life, become the most important condition for improving the well-being of everyone in our republic...

I want to say one more important thing. We need to firmly understand this: regardless of our nationality and people, we will be able to easily complete any difficult tasks only if all the workers of the republic solve the problems of Uzbekistan with integrity and cohesion, like children of the same family.

In fact, the ideas, visions and theories that have been valued by humanity for centuries, have acquired positive content, can be recognized as leading principles in the organization of practical activities, and achieve that thoughts, goals and actions are free from negative characteristics. Only one who receives it can rise to the level of perfection. Among the qualities that must be reflected in the image of a perfect person, the manifestation of such situations as scientific knowledge and the basics of specialized sciences, the ability to use modern techniques and technologies, and their services serve to illuminate the essence of the social necessity of training a qualified specialist. Today, it is the demand of the times to have young people who rely on their faith, do not turn back from their chosen path, and consider the honor of the country above everything else. Because only young people with strong faith and independent thinking can raise the prosperity of our country to the highest. The essence of the policy carried out in our republic and the calls of our President is the issue of raising a generation that has deep spirituality, does not follow the opinions of others, and has a pure faith. After all, lack of faith, following different trends and ideologies leads the society to crisis. Therefore, in almost all of his works, the President emphasizes the need to take a serious approach to the education of young people and to protect them from foreign ideas: "It is necessary to repeat - parents, teachers and coaches, we should not lose our vigilance in this matter, we should not be careless in the education of young people. "we must not"

Independent thinking enriches the qualities reflected in the image of a well-rounded person. After all, this quality is recognized as the main criteria for the positive result of activities organized at a certain stage of social development.

The national independence ideology of independent Uzbekistan and the "National Personnel Training Program" are based on the treasures of knowledge created by our people over thousands of years, and our rich ancient heritage. Because, in the teachings and pandnoms created by our ancestors as a result of their life experiences, in their worldly knowledge, there are humanitarian ideas such as protecting and glorifying the homeland, which are important and valuable not only

for today, but also for future generations. In particular, the lives and careers of people who believed in the motherland and did not spare their lives for the motherland, such as Shiroq, Tomaris, Muqanna, Spitamen, Najmuddin Kubro, Jalaluddin Manguberdi, Temur Malik and Amir Temur, who are considered the pride and pride of the Uzbek people. It is a requirement of today's time to learn and follow the example of the education of the school of patriotism.

The main part. Currently, there is no systematic experience in the field of patriotism education in preschool pedagogy, the existing methodological literature on patriotism education covers only its individual aspects - there is no system that reflects the completeness of this problem. The importance of moral and patriotic education is obvious, because it helps the child to develop the skills of relationships with adults and peers; interest in Russian traditions and customs is developing; There are feelings of responsibility and pride in the achievements of the country, attachment to one's family, home, kindergarten, street, district, country, and respect for work. We can say that, in general, the child's social competence is formed. In the future, I plan to continue the work on raising preschool children in the spirit of patriotism through the theme "Education of preschool children in the moral and patriotic spirit by introducing them to their mother nature." 4. Working with parents Parents should be integral participants in raising preschool children in a moral and patriotic spirit.

"In your family and under your leadership, the future citizen is growing ... everything that happens in the country must come to the children through your heart and mind" - A.S. Makarenko should be used when working with children and parents. This work is especially difficult nowadays. Because it requires great tact and patience. In many families, the issues of patriotism and citizenship are not considered important and sometimes cause confusion. Folder - copy I regularly hold interviews, consultations, questionnaires, surveys with the parents of my group. I make folders - changers, put visual information in the corner for parents, attract them to participate in free time, holidays, contests, exhibitions, promotions, open days. Below is a long-term plan for working with parents for the current year. Parents' poetry is the basis of a child's family education. From a young age, a child can feel that he is involved in the life of his people, that he is a child not only of his parents, but also of the entire Motherland. This feeling should appear before the child understands the concepts of "Motherland", "State", "Society". It is the parents who, with the help of bright and understandable examples from life, their work, and the state's attitude towards children, show that not only their relatives, but also the whole society, the whole country have hope for the child. Everyone knows that the motherland begins with a house, a street, a village. Exploring the places where you live with children, love to walk on familiar streets, find out what they are famous for is a task that belongs to any family. Kindergarten conditions do not always allow direct perception of social life. Parents can help here.

With the attentive attitude of parents to the issues of patriotic education, each walk can become a means of forming high feelings: "Here he once lived ...", "Here it is being built ...", etc. Forms and methods of implementation 1. Forms of implementation. Ethical and patriotic education of preschool children K. D. Ushinsky wrote: "Just as there is no person without pride, so there is no love for the country, and this love gives education the right key to the human heart...". That is why our interests have become moral values, national culture of our people, Russian pedagogical heritage. Explanatory note. Patriotism - love for the motherland, loyalty to it, responsibility and pride for it, working for its goodness, striving to protect and increase its wealth - these feelings and character traits begin to form in preschool age.

Without respect for the history and culture of one's Motherland, its state symbols, self-esteem, self-confidence, and thus a perfect person cannot be brought up. One cannot be a patriot without feeling a personal connection with the homeland, without knowing how our ancestors, grandfathers and great-grandfathers loved and honored it. There is no doubt that it is possible to form the elements of citizenship and patriotism in kindergarten as a result of purposeful educational and systematic work. We invite you to familiarize yourself with such work experience in kindergarten. Along with maintaining and strengthening children's health, I consider the upbringing of moral qualities of a small person to be one of the tasks. Patriotic education is an integral part of moral education. A true patriot should be physically and mentally healthy. That is

why education of a healthy lifestyle is closely related to education of patriotism and active citizenship. It is not for nothing that folk wisdom says: "A healthy mind in a healthy body." In the process of forming a sense of patriotism at preschool age, it is important to give children initial knowledge about the Motherland, our country, people, traditions, history, and culture. But at the same time, I think it is necessary to realize that the true essence of the feeling of patriotism is born in the human heart. Therefore, the period of preschool age is the most important for the formation of patriotic feelings due to the direct mental and emotional reactions characteristic of it, due to the openness of the soul that has not yet disappeared. A child begins to learn about the Motherland through his family and closest environment.

Summary. The researched scientific, pedagogical and artistic sources indicate that the development of pedagogical foundations for the formation of a sense of patriotism by introducing preschool children to great figures and historical monuments is one of the urgent problems.

The need to define the system of formation of military patriotism in students by using didactic tools to form a sense of patriotism by introducing preschool children to great figures and historical monuments was substantiated.
