

Advantages of Introducing Quality Management System in Textile Companies of the Republic

Raxmonov F.A.

Senior lecturer in the Department of Metrology and Standardization
Jizzakh Polytechnic Initiative

Abstract: In this article, there is a wide range of processes for the production of modern materials for the recycling of waste derived from industrial waste, metallurgy, oral cavity, chemical technology, mining, q beating materials, wood and other industrial waste data is highlighted.

Keywords: liberalization, modernization, qurilish industry, engineering and communication, investment, construction technology.

(Matthew 24:14; 28:19, 20) Today, the processes of reforming and liberalizing all aspects of political and socio-economic life, democratic renewal and modernization of our society are progressing rapidly. At the same time, the great tasks set out and undertaken to form a strong civil society are to create a strong foundation.

The Ministry of Foreign Affairs of the Republic of Uzbekistan does not implement deep reforms in the quality of education, especially in the higher education system, arising from the tasks set out in the laws "On the National Literature Programme" and "On Education". To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared. To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared[1].

The Action Strategy for the five pillars of National Development during 2017-2021, as approved by the President of the Republic of Uzbekistan's Decree of February 7, 2017, PF-4947, outlines specific directions of reform in all sectors in the next five years.

For example, the fourth direction, entitled "Social Development," is the complex and proportional h-economic development of districts and cities, improving the provision of affordable housing, electricity, gas, traffic, engineering and communications, as well as improving the quality of education in "Higher Education Institutions" hamda, infecting them that meet the demands of time to implement measures to prepare qualified personnel.

(Matthew 24:14; 28:19, 20) Therefore, in the years that followed, there was a lot of emphasis on our country's capital investment, but there was a lot of money allocated to develop it. Without developing the dry sh industry, the necessary achievements in public administration cannot be achieved. To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared.[2].

To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared.

(Matthew 24:14; 28:19, 20) In the mountainous regions of the country, the abundance of q azilma wealth reserves prohibits the construction of manufacturing materials in areas close to these gods and the widespread use of industrial waste in all raw materials hamda. In construction materials, mining, energy, metallurgy, and other industries, large quantities of output are collected and harvested.

Obtaininga variety of building materials through secondary mineral reserves and waste recycling in the Q hit materials industry provides the economy of the construction industry and is one of the environmental protection factors h. Large industrial enterprises throughout the country have a number of waste products, including phosphogips, shrubs, ashes, burnt rocks, sulfuric acid, cucumber active minerals, and so on. The larynk will hang.

In the years that followed, the construction materials manufacturing industry developed significantly. While their quality improves, their types are increasing, and modern technologies are being used. The resulting rise in sea levels from the meltway, the meltway beyond the tempers.

Scientific and practical work is being done by our Republican scientists to create modern quality materials and to apply them in construction. When raw materials based on industrial output indices are used complexly, the production of one phase can be used as an early material for the second phase. Materials obtained must comply with the country's metrology, standardization, and certification requirements in order to meet the requirements of the present time.

In recent years, a number of measures have been adopted in the country to encourage certified enterprises by introducing quality management systems based on harmonized standard requirements. The secret of these activities includes privileges and discounts that allow business entities planning to implement and certify quality management systems to economize in taxes and other compulsory payments [4].

The quality management system can be listed as a number of useful and beneficial factors for the implementation of the e-governance work in Companies of Uzbekistan:

First, an ISO 9000 certificate is needed for companies operating on the foreign market. In some cases, its existence is successful in participating in the tender, which means that it may be one of the mandatory conditions of the tender. It is a document confirming the company's commitment to quality ideas, so the image of the company increases with it. Lack of a certificate or export can cause a sharp increase in the price of a product or a waiver from the contract in general.

Second, the ISO 9000 certification attracts foreign investors to the company. This motivation can be used both to promote companies, to sell a company, and to invest funds in a specific project. The availability of the certificate also serves as a factor in reducing investment risks.

Third, the availability of a document confirming a company's compliance with ISO 9000 requirements is an important factor in increasing company property between socio-economic structures such as customers, suppliers, competitors, government agencies.

These advantages include the implementation of measures related to improving domestic productivity in the company's work. [5]

Textile companies in the country are granting a number of privileges for enterprises that have introduced quality management systems that meet international standards. This is tax credits in the first gallery, in which the amount of taxable income of legal entities in the calculation of income tax is reduced to the sum of investments aimed at introducing systems for managing the quality of their taxable income.

Textile companies that have introduced SMTs that meet international standards are exempt from paying corporate fees and added value when importing equipment and disposable products and precautions used to conduct laboratory research and tests of products in the Republic of Uzbekistan [6].

As a result of our observations, it can be noted that at the end of the day, textiles in the republic are increasing their efficiency, productivity, and income by establishing a quality management system in accordance with international requirements, resulting in an increase in competitiveness in domestic and foreign markets.

The experience of advanced textile enterprises in the region shows that the introduction of quality management system on the basis of ISO, increasing their competitiveness and sustainable operation in market conditions is an important condition, giving the corporations many advantages, including:

- ensure that the working environment of the enterprise is decided;
- improve management skills, industrial culture, technological discipline in the enterprise;
- opening market opportunities and maintaining existing sales markets;
- strengthening confidence in enterprise capabilities in booming and potential consumers;
- Improving the efficiency of companies, coordinating them accurately at work;
- Achieve and maintain the quality of products or services in accordance with the requirements set or expected by consumers;
- the possibility of competing with larger enterprises (i.e. acceptable prices are offered or maintain prices);

- The new market mechanism to be implemented in the ifat management system provides quality product preparation and further enhances consumer confidence in the full implementation of mutual agreements;
- ensuring the efficient use of resources, improving the work of the library, improving product quality, increasing work and economic conditions, developing a healthy working environment, and ensuring the unity and research of professionals;
- providing all conditions for sustainable production of quality and safe products by the manufacturer;
- To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared [7].

In conclusion, by introducing a quality management system in enterprises in accordance with international quality standards, it can elevate the activities of textile companies to a new phase, improve export safety, take a stable place in domestic, ham foreign markets, and ensure competitiveness.
