Annotation: This article describes how to motivate students in the learning process and explains that motivation is an important factor. In particular, it was noted that motivation can make a significant difference in the lives of students, laying the foundation for them to become good people in the future. It was noted that it is important to hold various events as part of the Science Month, encourage students to actively participate and reward them with honorary diplomas.

Keywords: Educational process, student motivation, subjects, activities, various competitions, cards, excellent reading, exemplary behavior, research, honors, recognition.

Motivating students is also a key factor in teaching science, especially in the educational process. One of the most important issues in teaching any subject is that the teacher can keep the students interested in their subject and subject. This requires a lot of effort and pedagogical skills from the teacher. No matter what subject the teacher teaches, he or she should be able to attract the students' attention, increase their interest in completing the assignments in the textbook, and check the homework and exercises, examples, problems, and assignments in class in a timely manner. They should work with each student individually and also work in groups. Every teacher should be constantly on the lookout for their subject. It should create healthy competition among students. Students should always be praised and encouraged for their homework and the exercises they do during the lesson, emphasizing that they have done their homework correctly and clearly. The role of incentives is great. For example, it is very important for each teacher to give certificates of honor, taking into account the activity of students in the activities and open lessons held as part of their science month. In this process, the student's self-confidence increases once again, and in the subsequent course of the lesson, the interest in this subject will continue to grow. Sharing their work and setting an example in front of everyone (in the classroom or at events) can also inspire other students, or other students can aim to be like that student and follow in their footsteps. . At least he tries to read better. Incentives, in particular, make a significant difference in the lives of students, paving the way for them to grow into good people in the future.

There are 25 to 35 students in each class. It can also be difficult for a teacher to get them all interested in their subject at the same time. But teachers need to overcome these challenges. To do this, they need to organize more open lessons or hold competition classes between classes. Conducting various activities (open lessons, competition lessons, spiritual-educational and intellectual events, art evenings), announcing the scores of each class on the conditions and awarding them with honorary titles (and various gifts Awards: art books, age-appropriate fairy tale books, and other necessary items) will also increase students' interest in science. He should be especially encouraged for his exemplary behavior, excellent reading, and active participation in events. In the framework of the month of science of the native language and literature and the Uzbek language, various competitions were held: posters, drawings, dictations, essays, essays. awarding them with certificates of honor, depending on the direction in which they participate, also lifts the spirits of students, changes their attitude to science, increases their interest. In addition, it is necessary to encourage students to study well in all subjects, to set an example for others with their exemplary behavior.

October is the month of mother tongue and literature and Uzbek language science. During this science month, teachers conduct various activities, evenings, open lessons. In this process, students' attitudes and interests towards their mother tongue are determined through various choices. This year marks the 32nd anniversary of the status of the Uzbek language as the state language. In connection with this,

posters about the language, contests of pictures were also held in all schools. By encouraging the students who take part in these competitions, you will be very happy to see the change in their mentality when they receive the certificates of honor, the light shining in their eyes, man. Therefore, it is very important to motivate students in the learning process. When a student is given a certificate of honor, he or she will certainly be happy to lead his or her parents, and as a result, will hear praise, kind words (or gifts) from their parents as well. may interest your child in reading). Through motivation, some students can make a big difference. This indicates that future seedlings are sprouting. Education is hardship, education is politics, education is life, education is the foundation of the future. Therefore, the teacher himself should also be a role model for the students.

Below we list the best psychological advice and compliments for children: Barakalla! Awesome! Long live! Great! You see, you did it! I knew you could! It turned out great! Congratulations, baby! You are the face of the school! I'm so glad I taught you! We need you! You made me so happy! Your help is very important to me! Of course you can! It will not end if he continues these words. These words should always be in the vocabulary of teachers and should always be used.

Elementary school teachers, on the other hand, can use a variety of incentive cards. For example, if students are told how many incentive cards they have collected in one lesson, or how many incentive cards a student has collected in a month, all of this is told to the students. their interests develop. This is especially interesting for young children. He also moves forward to increase my cards. His interest in good reading and beautiful writing develops. Through stimulation, children and students of different ages can easily overcome psychological difficulties, and the contradictions in their psyche will soften and change for the better. Psychologists point out that for school-age children, each period has its own contradictions. Every good word and encouragement given to school-age children (students) pays off.

Therefore, we, as parents and teachers, together should not tire of encouraging our children, our students and saying kind words to them. Because every student deserves recognition. But it is up to teachers and parents to achieve this status. So let's always acknowledge them!
