

Pedagogical Characteristics of Education of Love for Nature in Preschool Children.

G.Kushakova

Preschool education of JDPI named after A.Qodiriy
methodology department associate professor.

Jumaqulova Go'zal Saparboy qizi

Master of Jizzakh state pedagogical institute

Annotation: This article provides information on how to instill a love of nature in preschoolers, that soil, water, air, flora and fauna, underground and terrestrial resources are created for human needs.

Keywords: preschool age, children, nature, love, education, soil, water, air, plants, wildlife, underground, surface resources, man.

The higher values for men, this is his life. The importance of a clean environment in the activities of human life so incredibly great. Everyone to do this, first be pre environmental improvement than you know it, design, partnership development, the main attention should be qaratomog'i to manage. because of the inconsistency between the environmental situation and human nature is an important factor in overcoming situations than previously know. On this basis, you will be able to eliminate some chickpea somewhat circumstances that are available.

Needless to say, the nature of man and the universe, the relationship between man and society is the competition of its content in society, spiritual, mental and moral critique of its development factors, life will find their expression in the content of the process as. All creatures live and inanimate nature in relation to the knowledge of human relations to the world, showcases barkamollashtirish thought through the idea of unlimited access.

Specific human nature, purity, noble intentions, feelings are shaped, to know the holy soil, also reflects such noble qualities as mean to the motherland. Man – a child of nature, a particle. Nature's own there is the rule of law. Soil, water, air, plants and animals of the world, rich with the earth and under the earth as well as all has been created for human needs. Therefore, for human nature, water, air, soil, the source of life. Therefore nature protection today in the whole world, to the importance of having an independent state of uzbekistan has become an important issue.

Look at the history, unless we are musaffoligi the environment, environmental problems antiquity of man from ancient times has been the focus. From a small age, our children are given whole ecological concepts in the business process. Environmental, population, dwelling, keep the place clean, street, yard, water basins, and burn the children not to dirty chashmalar o'qtirilgan.

To follow the rules of feeding dogs and cats make pets and poultry animals in vain, so as not to grind their bemahal is not the reason to die, the child level to get it. Living water is a tool life factor, poklanuvchi source, is described as the main reserve of providing land obodonlik. Water the source of life, light, and also that should be that.

As it is known, the ancient country of our people to restrain the executive from the water gives you plenty of various diseases of the department of prosperity, and the smell of qo'lansa from the face of the earth, ketkizuvchi germs, known as the symbol of rushonolik. Therefore, make supplication to heaven, the ceremony were held in the time of drought to rain, songs ko'ylashgan.

The above thoughts can you say that, antiquity in antiquity, found their reflection in environmental concepts and activities in the life of our people and knowledge, then the nature of the relationship developed to a practical environment for the ticket. Therefore, the age of the children flora and fauna, nature odatlantirilgan to generation.

It should be noted in particular that in the same place, the ancient doctrine of environmental education in central asia. Originally uploaded to the conscience of man education of such criteria. Honesty, insof, diyonat, contentment, enthusiasm, knowledge, patience, discipline, infuse the love of the motherland,

loyalty, love the people who have like qualities of the environment has given special attention to the issues of uzbekistan. Most of their young citizens from all members of society, the elderly man jealously to preserve mother nature than them to be in a conscious relationship, the nature of sources, save – tergab norms in use, the tragical struggled to maintain the prevention of negative cases. Working around constantly to keep the environment clean on a regular basis. Purity, ozodalik, clean ground, weather, environmental factors such as water to most people in a conscious relationship, the fact that the true nature shaydosi appeared in their character.

Needless to say, increase the responsibility of the person from nurturing the environmental aspect in human society, along with improved it will help. Therefore, the population of “the mind of nature – and this is for you, the space we live, the nature of the creatures of the lives of the entire globe in a single ground” is the absorption of basic and applied knowledge that is necessary.

Environmental education is the process of rare and dear are a number of incomplete retained from the game, which is known from. For example : describe the ideas of the qur'an sharif has bright or xadis about environmental education. Also, many people thrive in the universe great scientists in their scientific works, and also ground effects, and vice-versa therefore be ta'kidalab was located.

As it is known from history, the king, during the period of khan as well as many gardens were founded here. 14 timur in samarkand them that have built in the garden..

Tabiatshunos ayrganlaridek scientists : “a fish in water, the birds of heaven, the depth for animals – forest, mountain – stone, the desert and the wilderness, it is necessary to. Should a person while the motherland. Conservation of nature – loving country is”.

Mother nature, I will say to the mother, while in life the most glorious one. Ho'rigan mother, the man who gave him a lifetime zabun face is black and punishment. Even mother nature so fond of him, to keep holy and honorable duty to keep everyone's apple of the eye is considered.

In the qur'an allah to grant blessings of a man of the world botanicals is one of the most glorious, and the universe is also not the absence of life on earth have been recorded.

Sallalohu of vassallam bless our prophet muhammad “**Anyone care to shed the patience to do it and even fruit tree and plant protection, people lit from fruit to each benefit in the presence of allah, the reward is not good” it is worth remembering that the holy words.**

We grant you the nature of the soil of the earth of our land their light tukkan jannatmakon let the value of each span. The gifts of nature that high consciousness, mind and shur our work to put the mother – earth dildan let's take our duty as sidqi in front of their children. Only then do we are a real man, the mother – the nature of perennial e'zoz will be awarded.

To do this, the system of continuous education in environmental education and education, knowledge about the development of ecological culture, nature in the minds of young people, is one of the important tasks of attention to enhancing the environment. Especially, in the minds of men to live up to now coming from the perspective of the consumer in relation to the nature of the elimination approach is important in psychology. Many works are carried out on the environmental problems in the republic.

Paid particular attention to the environmental education of the population. In particular, the committee for nature protection of the republic “and Insov biosfera” owned by the national program of unesco “Ekosan” is thought to be evidence of international environmental and health fund. But there are some problems in the system of continuous education.

Needless to say, the nature of love, attention and care, which is part of the nature of a holy love to wake up in the motherland of the human mind.

So, mother nature rich and colorful beauty of our land, the soil is invaluable, air filtering, it is the duty of everyone going with curative proud holy water.

It is noteworthy that we forget that human nature can live without, but the nature of the universe mankind to live without, but also can't live.

700 units in the republic of underground deposits identified, there are precious metals in the type 95.

The value of this 3 trillion reserves riches A.Q.SH dollars is equal to.

In uzbekistan today, with more than 4 thousand in need of protection, there is a unique architectural monument.

Therefore, the nature and the concept of blood and j the motherland. One, two, or rather, will not imagine. The natural riches of our people have called it is no coincidence that both the national riches.
