

Problems In the Use of Water Resources in Our Republic and Ways to Overcome Them

Turdimuratova Jamila Mirzamuratovna

Laboratory chemist of the Department of Sanitary and Epidemiological Welfare and Public Health of the city of Nukus

Abstract: Water resources due to the arid zone of the Republic unevenly distributed. Therefore, our country does not have enough water resources and requires rational use of water. Therefore, efficient use of water solves many problems. To do this, we need to use water-saving methods and find ways to use waste and wastewater more efficiently..

Keywords: Fields, water saving, wastewater, water saving methods, problems, rivers, drip irrigation, cost of water.

I. Introduction

Despite the limited water resources in the country, little attention is paid to its conservation, as a result, most of the water is wasted. Almost all consumers are constantly trying to get more water than normal they do. This leads to rising groundwater levels and re-salinization of arable land. In turn, more water is used to wash away the salt, which in turn increases the amount of recycled water that can be produced on irrigated land. It turns out that water for irrigation there are great opportunities for savings. This can be achieved, first of all, by concreting the canals, increasing the efficiency of irrigation networks through the use of troughs, as well as the use of advanced irrigation methods.

II. Research Methodology

In the process of analyzing this article, the logic of scientific knowledge, methods of historicity, consistency, and objectivity were widely used. A brief analysis of the problems of water use in the country and ways to overcome them was conducted. Rozanov N.P. The book of hydraulic structures was analyzed from the point of view of a methodological source.

III. Results And Discussions

In the process of analyzing this article, the logic of scientific knowledge, methods of historicity, consistency, and objectivity were widely used. A brief analysis of the problems of water use in the country and ways to overcome them was conducted. Rozanov N.P. The book of hydraulic structures was analyzed from the point of view of a methodological source.

IV. Conclusion

Fulfillment of the above-mentioned tasks will not only prevent water shortages, but also lead to better use of water resources, prevention of pollution of water sources, development of additional lands from the saved water resources, prevention of secondary salinization.
